

The following is a summary of the main database tables and their purposes in the Sports Deck application:

- Media: Stores uploaded files and metadata (used for user avatars).
- Follow: Represents a follower to followee relationship between users.
- User: Accounts and profile data; has relationships to posts, threads, polls, follows, and moderation actions.
- TranslationCache: Caches translations to avoid repeated translations of the same text.
- Post: Forum post or reply content; supports threads, edits, and moderation.
- Report: User- or system-generated report of a post or thread for moderation.
- PostEdit: Historical record of a post edit and who edited it.
- Team: team metadata and roster/competition details used across matches and threads.
- Match: Game details and results, including scores and related threads/sentiment.
- Season: Competition season context holding matches, standings, and eventual winner.
- AiModerationVerdict: AI-produced moderation verdicts and scores for posts and threads (content safety, toxicity, etc.).
- TeamStanding: League table entry for a team within a season.
- DailyDigest: System-generated daily summary content (per date).
- ForumThread: Discussion thread (general, team-specific, or match-specific) holding posts, tags, polls.
- Tag: Short labels for categorizing threads.
- Poll: Polls attached to threads; includes options and votes.
- PollOption: A selectable option for a poll.
- PollVote: A user's vote for a poll option (one vote per poll per user).
- ModerationAction: Actions moderators take in response to reports (hide, ban).
- Ban: A record of a user ban, its duration, and who imposed it.
- BanAppeal: User appeal for a ban and the decision outcome.
- SentimentSummary: Aggregated sentiment metrics for a thread, match, or team.
